

ABSTRACT

Pre-shipment data includes, in addition to product data representing features of the products P, data that associate product identification data for identifying each of the products P included in the product data with package identification data for identifying a carton C containing the products P. A management warehouse system 3a assumes that products corresponding to the product identification data associated with the package identification data have arrived if the package identification data included in barcode 52 scanned by a reader device exist in the pre-shipment data transmitted from the management warehouse system 3a.
